

Creating lists & store values

```
curency = ["USD", "GBP", "Euro", "Bhat", "INDR"]
rates = []

#taking inputs to my rates list using a loop
for i in range(5):
    rate = float(input(f"Enter rate in SL Rupee for {curency[i] }"))
    rates.append(rate)
```

Printing the values in an organized table

```
#print in a nice table

print("-"*30)
print(f"{'Curency':<10}{'Rate':>10}")
print("-"*30)

for x in range(5):
    print(f"{'Curency':<10}{'Rate':>10}")

print("-"*30)
```

Calculating one exchange amount

```
#calculating exchange ammount
choice= int(input("Enter 0-USD, 1-GBP, 2-Euro, 3-Bhat, 4-INDR ?"))
am = float(input("Enter how much ?"))
tot = rates[choice]*am
print("Bill is = ",tot)
```
